

COLOR BASE

ACCENT ANTIQUING

- Revives old stamped concrete flatwork with a new, realistic and authentic appearance.

- Provides color enhancement of old, worn, or dull substrates with consistent uniformity.

- Colors are engineered to match most stamped concrete finishes.

- Different degrees of antiquing can be achieved by varying application techniques.

Note: Variations in color can occur from differences in cement, aggregates, absorption rate, and method of application. Always test applications before hand to ensure correct color tone. This color chart is for approximation purposes only. Concrete Earth highly recommends performing on site full system tests (color base/accent antiquing/sealer) to obtain final rendition.
