Universal Color Guide

The Universal Color Guide represents 25 standard color options for UBP's Color Hardeners, Micro - Topp, Integratop SL, UniTop Spray Texture System, Thin Stamp Overlayment and Vertical Stamp Overlayment, Color Releases & Antique Agents and custom products in the future.

The Universal Color Guide is the solution for creating the ultimate color experience for today's decorative concrete landscape. UBP takes pride in offering the Decorative product line – a large selection of decorative concrete products that can provide endless design possibilities.

For over 80 years, UBP has gained a reputation for providing quality products in the construction industry. The UBP Decorative Concrete product line maintains this tradition in the decorative markets UBP serves; not only with products, but also with service and support.

NOTE: Failure to follow written specifications, could result in the following, but not limited to: spalling, shrinkage, cracking, peeling, chipping, delaminations, wash off or overall system failure.

Due to job conditions beyond our control, UBP makes no warranty as to the acceptance of the final color. Colors shown may vary upon installation. Concrete color is altered by many factors including cement color, slump, finishing practices and curing method. The colored decorative product should be applied on a sample section of the project and verified for color accuracy prior to the actual application process.
